

Ammunition Packing & Container Line

CAPABILITY SHEET - CARTONING LINES + HERMETIC CONTAINERS + UNIT LOADS + LEAK TEST - ENGINEERED TO ORDER

THE SYSTEM

WHAT	Ammunition packing and container lines - the last stations of the factory: counted into cartons, sealed into hermetic containers, proven, marked, palletised.
OUR ROLE	Neometrix engineers the cartoning lines, containers, fitments, unit loads, leak-test benches, marking and traceability, then installs and commissions.
STATUS	Engineered to order; quoted across unit-load box, hermetic container, palletisation and integrated packing-line requirements. No delivered line is claimed.

THE PACK

DRY	Hermetic steel containers to the quality authority's drawing - pressed bodies, welded seams, seated gaskets, over-centre latches, desiccant and indication.
STILL	Moulded fitments and liners hold every round in its own recess - designed against the filled weight and qualified by drop and stacking test.
IDENTIFIED	Lot identity marked on carton, box and pallet - chosen for durability over a decade, so the pack traces back to its acceptance certificate.

THE PROOF

LEAK TEST	Pressure-decay, immersion and vacuum testing of the closed container with its own closure hardware fitted - the seal that ships is the seal proven.
QUALIFICATION	Drop and stacking tests on the filled pack, dimensional gauging to the drawing, and marking legibility and durability checks.
CHANGEOVER	The specification everyone forgets - format change measured with a stopwatch, so a line running three calibre classes is liked, not endured.

DISTINCT & HONEST

THE FORMS	Automatic carton packing lines, hermetic containers and steel boxes, fitments, liners and unit loads, leak-test and qualification benches.
OUR FRANCHISE	Lines, containers, fitments, benches and traceability are ours; sensors, drives, controls and marking heads are bought-in certified items.
ENGAGEMENT	Send the calibres, the pack pattern and the drawing to sales@neometrixgroup.com for a clause-by-clause compliance matrix in two working days.
