

Modular Indoor Shooting Ranges

CAPABILITY SHEET - CONTAINERISED + TUBULAR + COMPOSITE + UPGRADATION - ENGINEERED TO ORDER

THE SYSTEM

WHAT	Modular indoor shooting ranges - live-fire marksmanship brought indoors: contained, air-managed, scored, available on demand on the unit's own ground.
OUR ROLE	Neometrix engineers the structures, envelope, traps, air systems, targetry, scoring and controls, then installs, commissions and supports.
STATUS	Engineered to order; quoted across containerised, tubular and modular composite shooting-range requirements. No delivered range is claimed.

THE RANGE

ENVELOPE	Modular AR500-class high-hardness steel with anti-ricochet rubber linings and baffles closing every trajectory - no round escapes.
TRAPS + AIR	Rubber-berm and steel deceleration traps with lead recovery - and downrange laminar airflow so the firer always breathes clean air.
TARGETS + CONTROL	Turning and running targets, electronic scoring to the instructor's console - behind interlocked entry and master cease-fire.

THE RULE

AVAILABILITY	Marksmanship is perishable - the range on the unit's own ground makes practice weekly, not annual, in any weather, at any hour.
EVERY ROUND	Every round fired is a round contained, trapped and recovered - the accounting identity the whole facility is built around.
INSTRUCTOR-OWNED	No door opens on a hot range; cease-fire is one master action - the training-facility discipline applied to live fire.

DISTINCT & HONEST

THE FORMS	Containerised tubular (CTSR class), joined-ISO and mobile units, building-scale composite ranges - and the upgradation of existing halls.
OUR FRANCHISE	Structures, envelope, traps, air, controls and commissioning are ours; target mechanisms and scoring sensors are integrated from certified components.
ENGAGEMENT	Send the lanes, the distance and the site to sales@neometrixgroup.com for a clause-by-clause compliance matrix in two working days.
